

QL2 Announces Availability on GSA IT Schedule 70 Contract

On-Demand Data Technology Provider Teams with GMP to Provide Government Agencies with Data Management Technology

SEATTLE — Aug. 17, 2009 — QL2, the leading on-demand data technology provider, announced today the availability of QL2 products and services on GSA IT Schedule 70 Contract # GS-35F-0858N. Through a strategic partnership with Government Marketing & Procurement, LLC (GMP) – a leader in government business development and contracting – QL2 is now an approved provider of on-demand data technology to all federal, state and local government agencies.

QL2 extracts data from any digital source – whether it is a scanned image or a website – and delivers it directly to customers in a usable format. The company's Government Solutions are designed to readily retrieve information from unstructured, semi-structured and structured information sources such as archived forms and .pdf files. QL2's patented WebQL technology uses concise SQL-like constructs to automatically extract information from an unlimited number of disparate data sources and then integrates the clean data into almost any database, storage or presentation format, or internal custom application.

"Despite the availability of internal data and data across the web, government agencies struggle with finding the right data and turning it into actionable intelligent information," said Joe Austin, CEO of GMP. "We recognized that solving this problem is critical to many government initiatives and sought out the most experienced and reliable partner with the best technology platform. It quickly became clear to us that QL2's innovative approach to data intelligence along with their positive past performance made it the right solution for our customers."

"QL2 Government Solutions are capable of navigating complex data structures, extracting targeted data with a high degree of precision, then repurposing the data into an actionable format – exactly the sort of tasks that prove costly across multiple agencies," said Russ Aldrich, CEO of QL2. "The result is on-demand, manageable access to this hard-to-reach data – an immensely more efficient and effective way to manage the vast amounts of information that government agencies deal with every day."

QL2's products and services are listed on GMP's GSA IT Schedule 70 Contract # GS-35F-0858N. For more information, please visit: <http://www.ql2.com>, <http://gmpgov.com/t-gov-gsa-ql2.aspx> or <http://www.gsaadvantage.gov>.

About QL2 Software, Inc.

QL2 is the leading on-demand data access platform provider that delivers the right data in the right format at the right time. Organizations that depend on market information as part of their commerce strategy rely on QL2 to gain vital access to quantitative data on products and markets. QL2 lets customers quickly understand their market and make critical changes to stay aligned with their strategic objectives.

More than 250 clients in 40 countries depend on QL2 Data as a Service (DaaS) solutions for accurate and reusable data on channels and products, competitive positioning, and industry specific markets. The QL2 client-roster includes more than 100 airlines, three of the top five global pharmaceuticals, and market leaders in retail, consumer products and life sciences. Founded in 2003, QL2 was named to the 2007 Inc. 500 and the 2008 and 2009 Inc. 5000 list of the fastest growing private companies, the 2008 Red Herring 100, and has been included in KMWorld's 100 Companies That Matter for the past four years and Trend-Setting Products for the past three years.
