## **New Pricing Model for WebQL**

*Awarding winning software repriced to match customer requirements*

SEATTLE, Wash., January 2, 2002 – Caesius Software, Inc., a provider of Web Harvesting software for Web research automation and Enterprise Application Integration (EAI) announces a new pricing model for its award winning product, WebQL. Large organizations engaged in business intelligence, competitive intelligence, and research activities benefit from WebQL's unique ability to make precise extractions of Web information using open-ended queries.

Effective immediately, WebQL will be available on an annual license basis. "WebQL's architecture provides our customers with flexible configuration options. Now, with this new pricing model, they can vary their costs based on how much of WebQL they use," commented Chris Buckingham, president of Caesius.

To assist with the deployment of WebQL, Caesius offers a wide variety of application development and execution services. Depending on desired performance and self-sufficiency, a minimum configuration for WebQL runs \$7,200 per year with a typical configuration in the \$15,000 to \$30,000 range. Perpetual license options continue to be available for customers preferring that pricing model.

**About Caesius**

Caesius Software™, Inc. ([www.Caesius.com](http://www.Caesius.com)) is enabling organizations to gather and manage critical business information from the World Wide Web. This Web information gathering process is earning its own labels among industry analysts -- "Web Harvesting", "Web Mining", or "Web Farming." Caesius has developed a powerful award-winning product, WebQL, automating this tedious process by systematically pinpointing and extracting information from the Web for presentation in readable report formats or delivery to applications for additional processing. This patent-pending technology powers business intelligence (BI) and facilitates enterprise application integration (EAI) delivering significant business benefits to companies and institutions of all sizes.

Founded in April 2000, Caesius Software's has won critical acclaim for its product, WebQL from industry analysts and the press. Launched in March 2001, WebQL Enterprise Edition is already being used to harvest the Web by some of the largest companies in the world.
