QL2 Software Releases WebQL 2.4

A Comprehensive Solution for Querying Unstructured Data

Seattle, WA – May 10 – QL2 Software, Inc., a leading provider of business intelligence to the travel, retail, and life science industries, has announced the release of WebQL 2.4, its flagship product that extracts targeted information from unstructured data sources for competitive analysis, marketing trends, and legislative compliance.

WebQL utilizes SQL-like syntax to precisely query unstructured data sources such as web pages, PDF, word processing, spreadsheet, and RSS files, then export the extracted data into an actionable format. This incremental release of WebQL features:

- Extensive support for website localization
- Data retrieval from both POP3 and IMAP email servers
- Native Word document parsing
- Automated RSS feed navigation

“This release further expands the immense amount of corporate knowledge WebQL makes accessible to business intelligence and governance applications,” said Greg Lauckhart, QL2 Software’s CTO. “With new features for crawling email archives, blogs, and word processing files, WebQL 2.4 provides end-to-end data integration.”

ABOUT QL2 SOFTWARE: Since 2000, QL2 has been quietly providing business intelligence to some of the world’s most competitive companies in the travel, retail, distribution, and life science industries. More information about QL2 Software can be found online at www.QL2.com.
